HORNADY XTP® 45 CALIBER (0.452") JACKETED HOLLOW POINT PISTOL BULLETS Designed for hunting, self-defense and law enforcement applications, the XTP® bullet demonstrates the kind of accuracy that led many competitive shooters to adopt it. Reliable performance makes the XTP® the most popular handgun bullet for both target shooters and hunters. But it's the stopping power of the XTP® bullet that has truly built its world-class reputation. From the onset, XTP® bullets were specifically designed to expand reliably at a wide range of handgun velocities to deliver deep penetration with every shot. PRODUCT FEATURES CONTROLLED EXPANSION Precise serrations divide the XTP® into symmetrical sections, strategically weakening the jacket and initiating controlled expansion even at low velocities. SWAGED CORE Total uniformity of core density ensures balanced expansion as well as in-flight stability. DRAWN GILDING METAL JACKET Expansion is controlled by varying jacket thickness down the length of the XTP®, providing a definite advantage over plated bullets which have a uniform jacket thickness over the entire bullet. CANNELURE On revolver bullets, the cannellure helps achieve accurate, consistent crimping. All cannellures are applied before the final forming process to eliminate any distortion to the finished bullet.
